BANKCARD PROCESSING

Improve customer service and reduce transaction costs by integrating credit and debit card processing to the **Merchant Plus!** Point of Sale system.

EFFICIENT PROCESSING

- Credit Card Authorization
- Automatic Settlement Option
- Debit Card Processing
- High Speed Web Based
- Integrated for maximum control
- Name & Address Verification and/or CVV2 Security code prompt for un-swiped cards
- PA-DSS Certified

EASY INTERFACE

- Operator or Customer Card Swipe
- Electronic signature with operator verification
- Customer PIN pad
- Intuitive Customer Prompts
- Easy Operator Lead Through
- PCI DSS Compatible
- Open Solution Supports most Processors

High Speed Authorization: Shorten lines and waiting time at point of sale by using your Internet connection to provide authorizations in about 5 seconds – a significant improvement over dial-up authorizations that can take from 30 to 60 seconds. Your customers will appreciate faster service at the register!

Lower Processing Costs: Merchant Plus! supports the latest processing standards that can significantly reduce your processing costs. Fees are significantly lowered by offering Debit Card support. Furthermore, you can avoid the high costs of "unqualified" transactions that result from late settlements and manually processed cards. With automatic batch settlement, Credit Card validation Security (CVV2 codes) and Name and Address Verification the savings in higher processing costs can often be counted in the thousands of dollars.

Benefit from Integration: Avoid the requirement of a separate physical device and process at point of sale, and the added cost of an extra phone line or tying up existing business lines. More importantly, you will save time and costs by avoiding human error that leads to mis-keyed tender amounts and lengthy reconciliation delays.

Security: **Merchant Plus!** is PA-DSS Certified (v1.2) to protect access to your customers' card information and limit your liability.
