

## INVENTORY CONTROL

Distinct from Merchandise Management, Inventory Control is all about transactions and the disciplined, consistent application of controls to assure that inventory is properly controlled and valued accurately. It is the basis for the merchandising reports and tools that enhance retail profits. But transactions represent the draft horse of a good system: they must be easy to use and efficient but they must be diverse enough to deliver results. *The basis of an effective Retail Management System is the assurance of accuracy in the numbers reported. Integration is the key to our success.*

- Inventory Adjustments
- Integrated Point of Sale

By integrating transactions logistically to the business flow and processes of a retail organization the **Merchant Plus!** transactional programs offer an easy to use and intuitive interface throughout the inventory life cycle that make it easy for your entire staff to quickly and accurately process transactions.

Entering Purchase Orders establishes the basis for merchandise planning and management, maintains the retailer's negotiation control and significantly streamlines the receiving process so merchandise is quickly moved to the store regardless of the distribution method. Price change controls helps to effectively control markups, markdowns and temporary promotions. Distribution and Transfers assure controls over the proper balancing of inventory to stock requirements based on balanced planning.
