RECEIVING MERCHANDISE

Right and Right Now! Customers can't buy merchandise if it's sitting in the back room. Special Orders for customers need to be processed efficiently to maximize service levels. But accuracy is just as important to assure that Purchase Order terms are properly met and that only merchandise that is received is paid for based on the terms of the order. More importantly, accurate receiving is critical to providing accuracy throughout the merchandising system and an important control point for reducing shrinkage – both paper errors and pilferage. With accurate receiving processes, merchandising decisions can be made with confidence and physical inventories are not only more accurate, but are required less frequently.

Easy and Flexible: The Receiving module is easy to use and effectively processes single store receipts and direct store deliveries. Business intelligence prevents errors and streamlines processes to minimize non-selling labor costs. The Receiving Module is tightly integrated to the flexible Distribution Modules for multi-store operations to assure efficient and balanced distributions for all locations.

The basis for increased profitability: With full integration to the **Merchant Plus!** system, the Receiving Module directly enhances your customers' experience, speeds up Point of Sale, eases the pain of Physical Inventories, updates merchandising and planning tools like the Open to Buy, and assures accurate and timely Accounts Payable processing of invoices.
