

SCAN MERCHANDISE RECEIPTS

MerchantPlus! UPC/ALU Scanning program offers the ability to scan Merchandise as it is received in the store or distribution center. Simply scan merchandise to receive it into the system. If the bar code has not yet been identified by the program, the easy to use touch screen interface can be used to associate the manufacturer's bar code to your inventory definitions either by item or using flexible size grids.

Alternatively, internal tickets can be printed and either scanned as received or only the remaining tickets can be scanned to update a Purchase Order by exceptions.

SAVE TIME

Save time by scanning receipts into the system and get merchandise to the floor more quickly.

SAVE MONEY

Save money by using the manufacturer's tags and eliminating the cost of tagging merchandise.
